How do we analyze the locations and relationships of people and places?

- Formulate questions about a topic in geography.
- Pose possible answers at local to global scales.
- Use maps, charts, graphs, and geospatial technologies to gather and organize geographic data.
- Analyze data for spatial information.
- Use data to answer geographic questions.
- Make decisions and justify conclusions with spatial evidence.
- Use maps, charts, and graphs to communicate conclusions.
- Think about planning for the future.
- Pursue other geographic questions.
